

SurModics Manufacturing

We've scaled up so you don't have to.

Our new world-class manufacturing and development facility is a tremendous step forward in our vision to commercialize parenteral and coated drug delivery products. This facility is built to meet the highest standards of aseptic pharmaceutical manufacture and, in particular, to handle the dosage form needs for extended-release delivery of a range of drug classes including small molecules, peptides, proteins and antibodies.

We've scaled up so you don't have to.

Our new facility expansion includes 90,000 square feet of aseptic manufacturing, scalable from 10 grams to 100s of kilograms.

This space includes four suites (over 16,000 square feet of classified space) each built with independent air handling systems, enabling us to accommodate multiple drug compounds in the same facility. All of our suites are designed and built with the necessary utilities and support systems.

Support infrastructure includes:

- 5,300 square foot cGMP **Quality Control Laboratory** with testing in compliance with global regulatory standards
- 2,400 square foot **Microbiology Laboratory** used to monitor the facility and to test and release products for clinical and commercial use
- 4,600 square foot **Engineering Laboratory** used to scale up and develop additional processes

Support utilities and equipment include:

- Half-suit isolators for aseptic processes
- 6,000-gallon water-for-injection system
- Stability chambers
- Vial washer
- Autoclave
- Depyrogenation oven

With the completion of this expansion, we are now able to manufacture pharmaceutical and device products (including clinical stage programs and commercial products) for all of our SurModics customers.

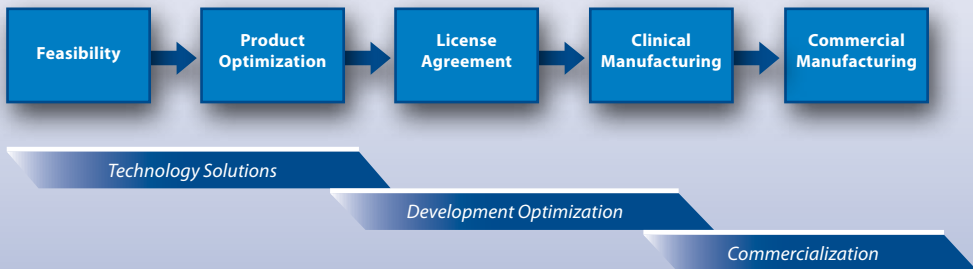

Contact us at (205) 917-6250 for more information or to schedule a tour of the facility. We look forward to hearing from you.

Our state-of-the-art facilities are complimented with our years of experience in the healthcare industry, providing the critical resources needed to get your product to market fast.

From product feasibility to manufacturing, we've got you covered.
